

eVitarium®

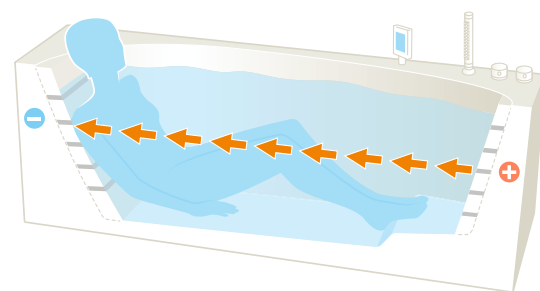

## eVitarium®

Both in the natural world and our modern lives, electricity is all around us, and even the human body is awash with a veritable storm of fine electrochemical impulses. These transmit information, as many bodily systems, such as the heart and nervous system, function electrochemically, as does the tensing and relaxing of muscles. The eVitarium® applies the principle of these impulses, integrating a mild electric current into a bathtub. When bathing in the eVitarium® part of the current flows through you, exerting a variety of positive effects on your body. When the current flows from your feet to your torso this has an energising effect on your body, enabling

it to gather new strength, rather like charging a battery. Alternatively, switch to the RELAX setting and the focus is on relaxation, as the current flows from your torso to your feet, thus calming your tissues and central nervous system. This inhibits the production of inflammatory mediators, enabling stressed body parts to regenerate more quickly. With their fine, fragrant ingredients, our ENERGY and RELAX ionised bath oils provide optimum support for the two settings. When bathing in the eVitarium® the ionised active ingredients in the oils flow with the electrolytes, ensuring that the restorative substances penetrate deep into your skin.

RELAX setting: when the current flows downwards from the torso it has a relaxing effect on the body.

ENERGY setting: When the current flows upwards from the feet it has an invigorating effect.

eVitarium®.

Intuitive touch control panel.

Flexible hand-held shower attachment, tap and temperature control.

Control unit with main switch and battery.

Detachable backrest.

Whether you opt for a relaxing or invigorating bath in the eVitarium®, the two current directions have one thing in common: they both promote your circulation. Small blood vessels and capillaries are dilated, stimulating your metabolism, improving the supply of nutrients to your skin and muscles while also eliminating waste products more rapidly. In addition, the eVitarium® has a harmonising effect on many bodily functions and on the vegetative nervous system. The eVitarium's® func-

tioning is augmented by sophisticated technological features. The main switch and battery are housed in a drawer at the foot end of the bathtub. After you have inserted the battery and activated the main switch the control unit disappears discretely. The water inlet and electrodes are fitted inconspicuously behind the backrest and foot section. The intuitive touch control panel makes setting the eVitarium® simplicity itself, for a bathing experience, whether relaxing or invigorating, that will absolutely spoil you.
